Professional Summary

Lead Software Engineer with 8+ years of experience architecting and delivering AI-driven, cloud-native applications. Specialized in Generative AI (GenAI), Large Language Models (LLMs), Agentic AI, and Retrieval-Augmented Generation (RAG), with hands-on expertise in LLMOps, prompt engineering, and AI evaluation. Proven track record leading cross-functional teams, embedding AI agents across the SDLC, and shipping scalable systems on AWS that measurably improve velocity, reliability, and customer experience.

Professional Experience

EPAM Systems

May 2022 – Present

Lead Software Engineer

- Led an agile cross-functional team of 8+ engineers in developing and deploying AI-powered applications, leveraging Generative AI and LLM-based tools (GitHub Copilot, Claude, ChatGPT, OpenAI API), resulting in a 20% reduction in deployment time through improved CI/CD with GitLab and Jenkins.
- Designed and integrated autonomous AI agents for automated code analysis, bug detection, and test case generation, improving code quality and reducing manual review effort.
- Built RAG pipelines using vector databases and embeddings to ground LLM responses on internal knowledge, improving answer accuracy and reducing hallucinations.
- Collaborated with product managers and engineers to improve UX through AI-driven analytics, increasing customer satisfaction by 25% on key features.
- Designed AWS-based authentication architecture with AI/ML anomaly detection, increasing token refresh efficiency by 40% and improving API response times.
- Integrated Datadog, BigPanda, and AI/ML-based AIOps monitoring for proactive alerting and root cause analysis, reducing debugging time by 50%.
- Mentored junior developers on prompt engineering and responsible AI usage for development, testing, and reporting.
- Led LLM-assisted code and design reviews, reducing post-production issues by 15%.
- Developed reusable prompt templates and LLM eval workflows to improve reliability and production readiness.
- Automated project status and performance reporting using GenAI tools.

Persistent Systems

Nov 2020 – May 2022

Lead Software Engineer

- Led integration of diverse data sources into a unified Big Data architecture using Snowflake, MySQL, Oracle, and Hive, applying AI/ML models for predictive analytics and improving data accessibility by 40%.
- Managed scrum and mentored 4+ developers, driving adoption of AI-powered development and testing tools and improving team delivery efficiency by 30%.
- Spearheaded launches of critical features using AI-driven project management and analytics tools, reducing rollout times by 20%.
- Partnered with support and product teams, leveraging NLP chatbots and analytics to reduce support tickets by 15%.

Manhattan Associates

Jul 2019 – May 2020

Software Engineer

- Improved allocation and inventory reliability by enhancing warehouse management features, reducing system errors by 20%.

- Conducted JUnit and AI-assisted unit testing, resolving critical bugs and ensuring on-time delivery for supply chain clients.

Kudelski Security

Jun 2018 – Jun 2019

Software Engineer

- Built REST APIs to streamline IoT device and data security lifecycles, achieving 99.9% system uptime.
- Developed an intuitive React UI that increased user satisfaction by 25%, and used AI/ML-based monitoring for proactive threat detection.

Kerv Digital

Sep 2017 – Jun 2018

Software Engineer

- Implemented customer-driven feature enhancements for Microsoft CRM, improving end-user adoption by 10% and resolving high-priority bugs.
- Used AI-powered bug tracking and prioritization tools to optimize workflow.

Technologies

Programming Languages: Java, Spring, Python, JavaScript, Node.js, SQL, MySQL

Generative AI & LLMs: GenAI, LLMs, Agentic AI, RAG, Prompt Engineering, LLM Evaluation, Fine-tuning, Embeddings, Semantic Search, MCP, Multimodal AI

AI/ML Tools & Platforms: GitHub Copilot, Claude, ChatGPT, OpenAI API, Hugging Face, LangChain, LlamaIndex, Pinecone, FAISS, pgvector, Amazon Bedrock, Azure OpenAI, TensorFlow (basic)

DevOps, Cloud & LLMOps: AWS, Docker, Kubernetes, Terraform, Jenkins, GitLab, Bitbucket, CI/CD, MLOps, LLMOps

Data & Analytics: Snowflake, Oracle, Hive, Datadog, BigPanda, AIOps, AI-based monitoring and reporting

Testing: JUnit, Mockito, AI-powered unit test generation, TDD

Other Technologies: Redis, RabbitMQ, Kafka, Postman, SOAP UI, REST APIs, React, HTML, CSS, Bootstrap, Jira, Confluence

Methodologies: Agile, Scrum, Kanban, DevSecOps, Continuous Delivery, AI-driven development, Responsible AI / AI Governance

Education

College of Engineering Roorkee

Aug 2013 – Apr 2017

Bachelor of Technology in Computer Science

GPA: 8.20
