Professional Summary

Lead Software Engineer with 8+ years of experience architecting and delivering AI-driven, cloud-native applications. Specialized in Generative AI (GenAI), Large Language Models (LLMs), Agentic AI, and Retrieval-Augmented Generation (RAG), with hands-on expertise in LLMOps, prompt engineering, and AI evaluation. Proven track record leading cross-functional teams, embedding AI agents across the SDLC, and shipping scalable systems on AWS that measurably improve velocity, reliability, and customer experience.

Professional Experience

EPAM Systems

May 2022 – Present

Lead Software Engineer

- Led an agile cross-functional team of 8+ engineers, leveraging AI-powered tools (GitHub Copilot, Claude, Chat-GPT) for code generation, reviews, and documentation, cutting deployment time by 20% via enhanced CI/CD with GitLab and Jenkins.
- Designed and integrated autonomous AI agents for automated code analysis, bug detection, and test case generation, improving code quality and reducing manual review effort.
- Designed robust AWS-based authentication architecture with AI-based anomaly detection, increasing token refresh efficiency by 40% and improving API response times.
- Integrated Datadog, BigPanda, and AI-based monitoring for proactive alerting and root cause analysis, reducing debugging time by 50%.
- Drove a 25% increase in customer satisfaction on key features through AI-driven analytics and stakeholder collaboration.

Persistent Systems

Nov 2020 – May 2022

Lead Software Engineer

- Led integration of diverse data sources into a unified Big Data architecture using Snowflake, MySQL, Oracle, and Hive, boosting data accessibility and analytics capabilities by 40%.
- Managed scrum and mentored 4+ developers, improving team delivery efficiency by 30%.
- Spearheaded launches of critical features using data-driven project management practices, reducing feature rollout times by 20%.
- Partnered with support and product teams to address feature requests and resolve issues, leading to a 15% reduction in support tickets.

Manhattan Associates

Jul 2019 – May 2020

Software Engineer

- Improved allocation and inventory reliability by enhancing warehouse management features, reducing system errors by 20%.
- Conducted JUnit unit testing, resolving critical bugs and ensuring on-time delivery for supply chain clients.

Kudelski Security

Jun 2018 – Jun 2019

Software Engineer

- Built REST APIs to streamline IoT device and data security lifecycles, achieving 99.9% system uptime.
- Developed an intuitive React UI, increasing user satisfaction by 25%, and implemented proactive security monitoring for threat detection.

Kerv Digital

Sep 2017 – Jun 2018

Software Engineer

- Implemented customer-driven feature enhancements for Microsoft CRM, improving end-user adoption by 10% and resolving high-priority bugs.

- Used bug tracking and prioritization tools to optimize workflow.

Technologies

Programming Languages: Java, Spring, Python, JavaScript, Node.js, SQL, MySQL

Generative AI & LLMs: GenAI, Agentic AI, Prompt Engineering, Fine-tuning, Embeddings, Semantic Search, MCP, Multimodal AI

AI/ML Tools & Platforms: GitHub Copilot, Claude, ChatGPT, OpenAI API

DevOps, Cloud & LLMOps: AWS, Docker, Kubernetes, Terraform, Jenkins, GitLab, Bitbucket, CI/CD, MLOps, LLMOps

Data & Analytics: Snowflake, Oracle, Hive, Datadog, BigPanda

Testing: JUnit, Mockito, AI-powered unit test generation, TDD

Other Technologies: Redis, RabbitMQ, Kafka, Postman, SOAP UI, REST APIs, React, HTML, CSS, Bootstrap, Jira, Confluence

Methodologies: Agile, Scrum, Kanban, DevSecOps, Continuous Delivery, AI-driven development, Responsible AI / AI Governance

Education

College of Engineering Roorkee

Bachelor of Technology in Computer Science

GPA: 8.20

Aug 2013 – Apr 2017
